Education

Visvesvaraya Technological University, B.E. in Computer Science and Engineering — Aug 2019 – Jul 2023

Experience

Software Developer, InfiMed Solutions (UniversalMed Supply Inc.) — May 2025 - Present

- Contributed to the in-house platform **Universal Med Supply**, managing **Durable Medical Equipment (DME)** insurance claims, order workflows, and patient communication for large healthcare providers.
- Maintained and optimized an existing **web application**, resolving production issues, implementing features, and improving system performance.
- Optimized slow transactions by eliminating redundant queries and implementing **database indexing**.
- Developed the frontend for **Flutter mobile application** for delivery personnel with order lookup, delivery confirmation, and patient verification workflows.
- Supported integrations with **insurance validation APIs** and internal notification services, ensuring reliable backend–frontend data flow.
- Participated in code reviews, QA testing, and technical documentation while adhering to **HIPAA compliance** standards.
- Built an AI-driven **Call Recording Analysis System** using **Vertex AI**, reducing manual QA effort by **60–70%**.
- Processed and analyzed **1,000+ monthly call recordings**, extracting compliance indicators and performance metrics.
- Designed speech-to-text and NLP pipelines achieving **85–90% transcription accuracy**.
- Developed a **RAG-based AI assistant** across **500+ internal policy documents**, reducing policy search time by **∼75%**.
- Reduced QA feedback turnaround from **2–3 days to under 4 hours** via automated analysis pipelines.
- Automated audio ingestion and indexing using **Google Drive API** and **Apps Script**, decreasing manual reporting effort by **∼80%**.
- Implemented workflows in a **HIPAA-compliant Google Cloud environment** with role-based access control (IAM).
- Accelerated model experimentation cycles by **∼50%** using Google Colab and Google AI Studio.
- Collaborated with IT and security teams to resolve enterprise domain restrictions through IAM role configuration and controlled access policies.

Software Engineer, Cocotechoes Solutions Pvt. Ltd. — Nov 2023 – Apr 2025

- Developed a **Flutter application with AR capabilities** using **Wikitude**, enhancing multimedia experiences through augmented reality.
- Designed intuitive UI components and integrated backend services to deliver a seamless user experience.
- Integrated **Wikitude AR.js** with Flutter via API-based communication and deployed the app to the **Google Play Store**.
- Built an enhanced AR version using **Vuforia SDK** and **Unity3D** for advanced AR content rendering.
- Implemented **Unity scripting** to enable communication between **Flutter** and **Unity**.
- Developed a **machine learning–based voice analysis system** using **Python**, achieving **93.5% accuracy**.
- Applied data augmentation and feature engineering techniques to improve model generalization.
- Integrated the voice analysis engine into a **Flask web application** with real-time API capabilities.
- Deployed scalable solutions on **Google Cloud Platform (GCP)** for reliable processing of large datasets.
- Built a **Chrome Extension** enabling real-time voice analysis during meetings.

- Developed a personality profiling module based on the **Enneagram framework**.
- Built a full-stack **adventure travel platform** using **Laravel 11.31 (PHP 8.2)** with a custom admin dashboard.
- Implemented authentication and secure route protection using **Laravel Sanctum**.
- Designed **RESTful APIs** using MVC architecture to ensure maintainable and reusable backend logic.
- Developed responsive UI using **Blade templating** for improved cross-device usability.
- Designed database schemas using **Laravel migrations** and seeders with SQL databases.
- Implemented file upload and media management systems with structured storage access.
- Created admin dashboards with paginated, sortable, and filterable data tables.
- Deployed production builds to shared hosting environments with secure environment configuration.
- Built a **Laravel-based student assistance portal** providing global access to financial and medical support resources.
- Integrated a **HubSpot chatbot** for automated real-time user support.

Software Engineer (Freelance), Embrise (Self-founded) Aug 2023 - Oct 2023

- Founded and managed a freelance software initiative delivering three parallel client projects across e-commerce, travel, and fintech domains.
- Developed an **e-commerce perfume platform** using **Laravel Blade**, **Sanctum authentication**, and integrated the **Cashfree payment gateway**.
- Built a responsive **travel agency website** with package management, inquiry workflows, and admin CMS features.
- Engineered a secure **desktop transaction management system** for a national bank union using **Flask (Python)** and packaged via **PyInstaller**.
- Managed full project lifecycle including requirement gathering, development, deployment, and client communication.

Associate Software Developer Intern, Nextuple India Pvt. Ltd. Feb 2023 - Jul 2023

- Built **E-Wallet** and **Food Ordering** POC applications using **Spring Boot (Java)** and **React.js**.
- Contributed to a live microservices-based project focused on optimizing customer order sourcing workflows.
- Implemented **near-caching strategies** to improve application startup performance.
- Diagnosed and resolved UI and backend issues to enhance system stability.
- Collaborated within an **Agile development environment** to deliver production-ready solutions.

Skills

Languages: C, C++, Java, Javascript, Dart, PHP, Python

Technologies: React, SpringBoot, Flutter, Wikitude, Vuforia, Laravel, Flask, GitHub, Unity3D, JIRA, Google Cloud Platform

Database/Testing: MongoDB, MySQL, JUnit, JEST

Certifications

CCNA - 1 Introduction to Networks Dec 2022
Cloud Foundations Aug 2024
